

# STUBBS RANCH

308+/- ACRES

VICTORIA COUNTY  
PROPERTY DESCRIPTION

## READY TO HUNT!!

308+/- acres in southern Victoria County off San Antonio River Road.

Excellent hunting ranch located just 30 minutes south of Victoria, Texas. The entire ranch is high fenced and is mostly wooded with some open areas. Plenty of senderos and clean fence lines provide good access to the property, which has tons of native wildlife including whitetail deer with introduced South Texas genetics, hogs and turkey.

Two stocked ponds and a water trough provide ample water for wildlife and cattle. One pond is fed via solar pump and the other by water well.

The property has a good set of cattle pens and comes with 4 blinds, 4 feeders and 4 protein feeders.

The ranch comes equipped with a custom 30 x 40 metal building with walk-in cooler, cleaning station, air conditioning, kitchen, bath/shower, bedroom, loft area, and also has plenty of large outdoor covered storage areas for equipment.

### Property Directions:

From Victoria, take Hwy 77 South to San Antonio River Road. Take right on San Antonio River Road and easement entrance is approx. 9 miles on the right.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
Web Soil Survey URL:  
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Victoria County, Texas  
Survey Area Data: Version 15, Nov 8, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 26, 2011—Oct 14, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
DaA	Dacosta sandy clay loam, 0 to 1 percent slopes	109.6	35.5%
DnA	Dacosta-Contee complex , 0 to 1 percent slopes	61.1	19.8%
EdA	Edna loam, 0 to 1 percent slopes	79.0	25.6%
FaA	Faddin very fine sandy loam, 0 to 1 percent slopes	28.1	9.1%
LaA	Laewest clay, 0 to 1 percent slopes	1.1	0.4%
TeA	Telferner fine sandy loam, 0 to 1 percent slopes	29.7	9.6%
<b>Totals for Area of Interest</b>		<b>308.7</b>	<b>100.0%</b>

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it
